

Type 1 - Custom Lock Key Safe

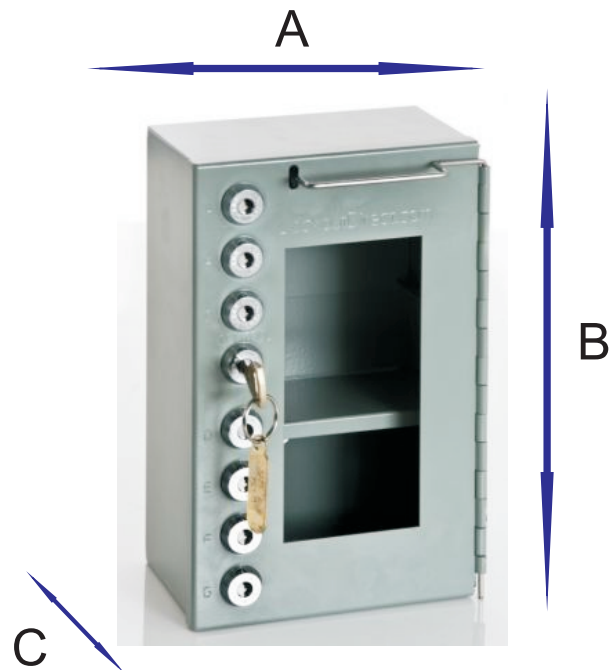

Manufactured to CEGB Standard 13523 providing safe retention of keys or other means used for isolating or "locking off" e.g. Fuses etc.

A = Any width

B = Any Height

C = Any Depth

Any Number of Keys

High Quality Keys & Cam Locks

The Keys are on a **key restricted profile** and are custom built with all differs and control keys recorded guaranteeing no duplication. A Key chart will be generated and filed on our key system database incase additional keys / Custom Lockout boxes are required. Each Key has a unique number on it

Operation

The operation of Type 1 - Custom Key Safe or Lockout Box is as follows:-

1. The control key can be withdrawn in the locked & unlocked positions
2. The secondary lock keys can only be removed in the locked position
3. Lock mechanisms are independent of each other
4. The key safe is secure until all keys are in the unlocked position.
5. Control locks and keys are alike within a key control area.
6. Secondary locks and keys differ within a key control area

Construction

Key safes are of single or multiple units, which can be closely mounted together. The box and door are constructed from 1.2mm thick mild steel sheet, using a hinge pin 3.15mm diameter, secured to prevent withdrawal. The door is fitted with clear plastic 3mm thick, arranged to permit entry by breaking. All safes have one control lock and either four or seven secondary locks. Alternatively, we custom make these safes to any number of locks. All locks are identified on the door of the safe together with the safe number. All keys are provided with brass tags engraved with the safe number and secondary lock identification.
